

Open named model views from the drawing editor

Quite often, especially when working with GA drawings, you need to have access to different model views.

Usually, you have to have the model views open already when you open the drawing editor, as you can not open or create any new views from inside the drawing editor. But there is a better way to do it.

If you add a shortcut for command "Open named view list" or add that command to the drawing editor toolbars, you can always open the named view list also from the drawing editor and choose which model views you want to have open when in the drawing editor.

Note! If you open Tools => Customize dialog from the drawing editor, the changes to the toolbars are not saved. Keyboard shortcuts for drawing editor can and must be defined by opening Tools => Customize from the drawing editor.
